

# CANCER SCREENING

## Breast Cancer

Calculate your breast cancer risk by visiting: [Cancer.gov/bcrisktool](http://Cancer.gov/bcrisktool)

*Women should talk with their physicians regularly starting as early as age 25 about their individualized risk for breast cancer, as higher risk women may benefit from genetic counseling or early screening.*

## Cervical Cancer

\*Women with an abnormal diagnosis should be tested for 20 years following the result, even if testing continues past age 65. A woman whose uterus and cervix have been removed for non-cervical cancer reasons, and who has no history of cervical or pre-cervical cancer, should not be tested.

## Colorectal Cancer

\*Dependent on your risk, there are alternative tests. Consult with your physician for more information.

## Lung Cancer

## Skin Cancer

\*Those at high risk for skin cancer include those with reduced immunity, personal history of skin cancer and a strong family history of skin cancer.
